

## 1 Check if python is already installed

- Open the windows console pressing the keys: windows (windows key) + r. Then write cmd and press ok.

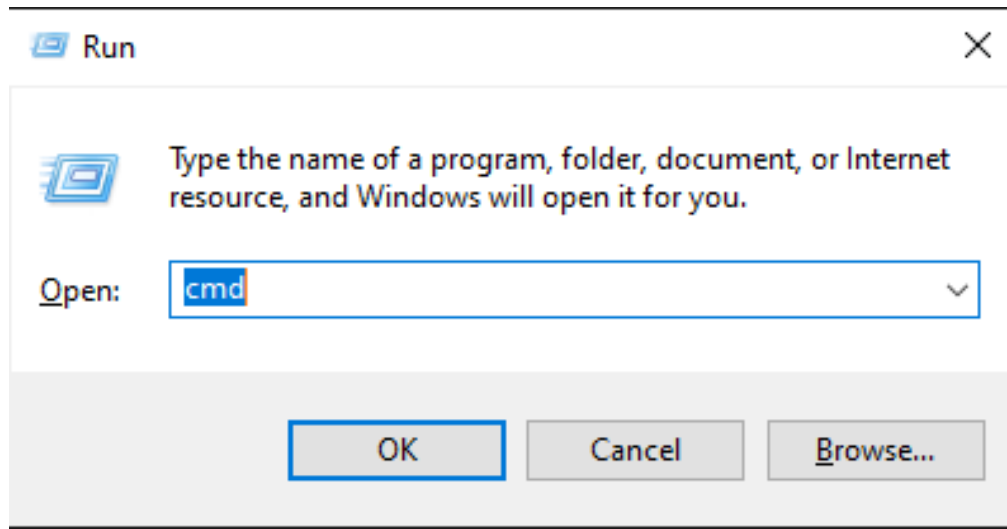

Рис. 1:

- Write the next command in console:

Листинг 1:

```
1 python --version
```

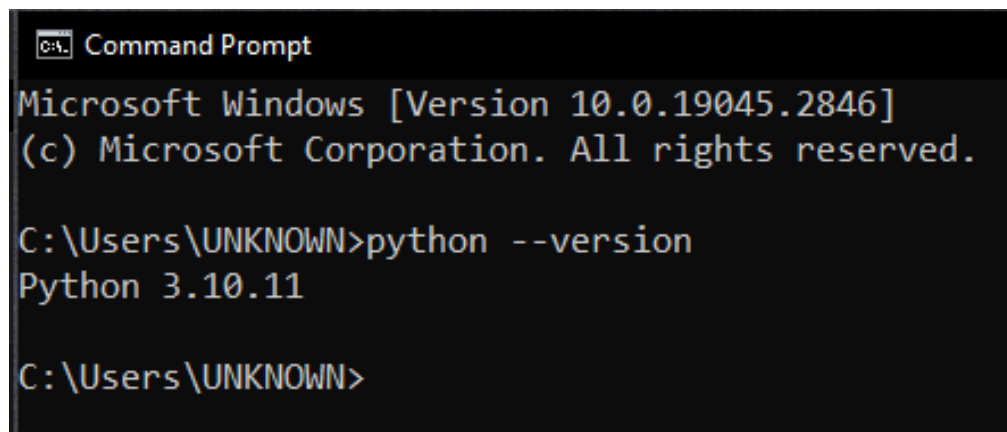

Рис. 2:

If the command of the listing 1 returns a valid version then you already have python installed. However if no version is shown then you need to install python following the next steps.

## 2 Install Python

To install python go to the search bar and write *store* then open the microsoft store and type in the search bar *python*, then click on get . Is recommended to dowload the version 3.10.
